Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slippery surface, Poor visibility	3H	<ul style="list-style-type: none"> - Conduct a site safety briefing before commencing work - Ensure proper lighting in the workspace - Clean and dry the work area to prevent slips - Use non-slip mats in the area - Wear appropriate PPE such as high-visibility jackets and safety boots - Ensure communication devices are operational - Perform a pre-start checklist - Confirm that all tools and equipment are in good condition - Notify all personnel of work commencement - Restrict access to authorised personnel only 	2M
2. Lifting Vehicle	Incorrect lifting, Vehicle instability	4H	<ul style="list-style-type: none"> - Use proper lifting equipment and ensure it is suitable for the vehicle - Check the lifting equipment for defects before use - Follow manufacturer's guidelines for lifting procedures - Ensure the vehicle is on a flat and stable surface - Use wheel chocks to prevent movement - Confirm vehicle weight does not exceed lifting equipment capacity - Monitor lifting operation for stability throughout - Brief personnel on emergency procedures - Maintain exclusion zone around activity - Update risk assessment if conditions change 	2M
3. Securing Vehicle	Collapse, Inadequate support	4A	<ul style="list-style-type: none"> - Use approved vehicle stands rated for the vehicle weight - Double check that vehicle stands are placed correctly - Do not substitute with non-approved stands - Ensure vehicle is stable before commencing underbody work - Conduct visual checks on stands during use - Provide training on correct setup procedures - Verify that jacks are not relied upon solely for support - Document the securing process in the safety log 	2M

Incident Details		Investigation Findings	Corrective Actions
Incident Type	Slip and Fall	Wet floor, no warning signs	Implement regular maintenance and certification of floors
Location	Reception Area	Spill not cleaned up promptly	Establish spill response protocol
Date	2023-10-27	Staff not trained on spill response	Conduct spill response training
Time	14:30	Slippery surface	Use anti-slip mats
Involved Parties	John Doe (Guest)	Wet floor	Implement regular maintenance and certification of floors
