								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Improper handling of materials, Inadequate ventilation	4A	<ul style="list-style-type: none"> Conduct a safety briefing prior to work commencement Use RPEs designed for specific pollutants Utilise monitoring equipment to test air quality Set up exclusion zones around areas with high pollution Ensure all workers are trained in emergency procedures Arrange for regular health surveillance of staff Install air filtration systems Check and maintain ventilation equipment Store hazardous materials in ventilated areas Secure material lids to prevent leaks 	2M
2. Site Assessment	Unfamiliar site conditions, Presence of unknown chemicals	3H	<ul style="list-style-type: none"> Conduct thorough site surveys Consult site-specific safety data sheets (SDS) Use test kits to identify potential pollutants Implement a hazard communication program Design a specific site entry protocol Establish clear site demarcations Keep records of all assessments Regularly update site assessment reports Utilise drone technology for better surveillance Restrict access to assessment areas 	2M
3. Equipment Setup	Equipment malfunction, Inadequate pollution controls	3H	<ul style="list-style-type: none"> Perform regular maintenance checks on equipment Use certified and fit-for-purpose equipment Implement pre-start equipment checks Ensure backup equipment is available Designate trained operators for all equipment Record all maintenance activities Schedule equipment recalibration Implement a lockout/tagout system 	1L
