Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Site Inspection	uneven surfaces, restricted access areas	3H	<ul style="list-style-type: none"> Conduct a pre-work site inspection Use safety signs to mark restricted areas Ensure ground is stable and clear of obstructions Use appropriate PPE for site conditions Secure necessary access permits before starting work Provide training for hazard identification Communicate site conditions during daily briefings Ensure clear pathways for movement Regularly check site for new hazards Deploy barriers around unsafe areas 	2M
2. Unloading Materials	falling materials, manual handling injuries	4H	<ul style="list-style-type: none"> Use appropriate lifting equipment Secure materials before transportation Train workers in manual handling techniques Wear hard hats & gloves Assign a spotter during unloading Ensure clear communication protocols Conduct toolbox talks on safe unloading practices Use designated unloading areas Inspect lifting equipment regularly Ensure materials are well-balanced during lift 	2M
3. Storage of Steel Components	collapse, trip hazards	3H	<ul style="list-style-type: none"> Stack materials neatly to prevent collapse Use marked storage locations Inspect storage racks regularly Educate workers on proper stacking methods Conduct regular checks for stability Implement a housekeeping schedule Use non-slip mats around storage areas Correctly label all materials 	1L
