Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate assessment of weight, Incorrect lifting technique	3H	<ul style="list-style-type: none"> - Conduct a briefing to outline lifting procedures and importance of weight assessment. - Ensure team members are aware of the available resources and equipment for lifting assistance. - Assign a responsible person to supervise the lifting operations. - Provide training on proper lifting techniques. - Use weight scales to measure item weight before lifting. - Ensure workers have the correct personal protective equipment. - Review manufacturer's instructions regarding manual handling of items. - Ensure good lighting in the work area to visually assess item size. - Confirm all personnel are physically capable of performing the lifting task. - Prepare a clear path for item movement to avoid trip hazards. 	2M
2. Assessment	Misjudgement of item weight, Forgetting assessment tools	3H	<ul style="list-style-type: none"> - Use calibrated scales to weigh items if practicable. - Estimate weight through known data if scales are unavailable. - Refer to item labels or documentation for weight information. - Use a digital measuring tool to confirm dimensions, if necessary. - Implement buddy system for second verification of item weight. - Include weight assessment in pre-lifting safety checklist. - Ensure that assessment tools are available and calibrated before starting work. - Re-assess items that seem awkward or oversized. - Consider environment factors that may affect weight assessment, such as moisture. - Keep weight assessment records for future reference. 	2M
3. Planning	Lack of planning, Unavailability of lifting aids	3H	<ul style="list-style-type: none"> - Confirm availability of manual handling aids such as trolleys and hoists. - Plan route and final placement of items before starting the lift. - Hold pre-lift planning meetings to discuss approach and strategy. - Ensure emergency plans are in place to address potential incidents. - Distribute lifting aids evenly throughout the work area. - Create a detailed work plan documenting the lift and associated risks. - Allocate sufficient resources and manpower for the task. - Attach quick-reference weight measurement conversions charts where necessary. 	1L
