THIS RISK ASSESSMENT IS APPROVED BY THE PCBU ON THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a RISK ASSESSMENT is prepared before the proposed work starts.

Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slip hazards from spilled fluids, Electrical shocks	3H	<ul style="list-style-type: none"> - Use absorbent materials to clean up spills immediately - Wear rubber-soled shoes to minimise slipping - Check for leaks in fluids before beginning work - Ensure electrical equipment is properly insulated - Use appropriate PPE such as rubber gloves - Conduct electrical safety briefing before commencing work - Keep the work area organised to prevent trips - Regularly inspect the floor for hazards - Ensure team has access to first aid kit - Read and understand the safety data sheets 	2M
2. Disconnect Battery	Electrical shock, Short circuit	3H	<ul style="list-style-type: none"> - Ensure power is turned off before touching connectors - Use insulated tools for disconnecting battery - Check for visible damage on battery terminals - Wear safety glasses to protect eyes - Follow proper disconnection sequence - Avoid contact with conductive materials - Ensure a spill kit is accessible nearby - Keep water and conductive items away from the work area - Make sure hands are dry before handling battery - Confirm disconnection with multimeter 	2M
3. Remove Connector	Pinching fingers, Inhaling dust	2M	<ul style="list-style-type: none"> - Apply gentle pressure to disengage connectors - Use tools instead of hands where possible - Wear snug-fitting gloves to reduce pinching risk - Dust area with an industrial vacuum before disassembly - Have ventilation or dust masks available - Keep hands clear of opposing parts - Train staff on correct removal technique - Use pliers designed for connector removal 	1L
