UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records.	Administrative Change	
								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips on wet surfaces, Injury during lifting	3H	<ul style="list-style-type: none"> - Inspect the area for wet surfaces and dry if necessary before beginning work - Use proper lifting techniques when moving equipment - Ensure all personal protective equipment (PPE) is available and in good condition - Conduct a pre-work briefing to cover potential hazards and controls - Keep work area tidy to prevent trips and falls - Ensure sufficient lighting in the work area - Designate walkways to avoid interference with vacuum equipment operation - Provide adequate work area signage - Check the condition of the vacuum cleaner prior to use - Ensure workers are trained in manual handling techniques 	2M
2. Inspection of Equipment	Faulty electrical cables, Mechanical injury from faulty parts	3H	<ul style="list-style-type: none"> - Conduct visual inspection of the vacuum cleaner, focusing on cables and plugs - Test all electrical connections for safety before use - Verify all moving parts are securely fastened and operational - Replace or repair any faulty cables or components immediately - Use testing and tagging procedures according to Australian standards - Supervise less experienced workers during inspections - Maintain up-to-date inspection records - Ensure equipment has a current service tag - Remove defective equipment from service until repaired - Ensure all users are trained in equipment inspection methods 	1L
3. Setup of Vacuum Cleaner	Electric shock, Trip hazards from cables	3H	<ul style="list-style-type: none"> - Use power sources with RCDs (Residual Current Devices) - Route cables away from walk areas to prevent trips - Use cable covers or guards where necessary - Check power cord length is sufficient to avoid tension - Have suitable emergency procedures in place - Secure cable connections with tape or clips - Conduct regular checks during the task to ensure cables remain secure - Use signage to indicate shared walkway hazards 	2M
