Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slippery surfaces, Inadequate PPE	3H	<ul style="list-style-type: none"> - Conduct a pre-task briefing to ensure awareness - Use appropriate PPE including gloves and non-slip boots - Inspect the area for any immediate hazards - Ensure all cleaning equipment is in good condition - Clearly mark the affected area with signage - Restrict access to the area - Review MSDS for cleaning chemicals - Ensure spill kits are complete and accessible - Verify communication devices are functional - Identify nearest first aid station 	2M
2. Containment	Spill expansion, Slips	4H	<ul style="list-style-type: none"> - Use absorbent barriers to contain the spill - Quickly deploy spill mats or booms - Ensure workers are positioned out of immediate spill path - Maintain clear escape routes - Monitor containment effectiveness - Avoid rushing the containment process - Utilize secondary containment if primary fails - Maintain communication among team members - Alert additional personnel if spill size increases - Regularly check PPE condition 	3H
3. Absorption	Exposure to hazardous substances, Inhalation of fumes	3H	<ul style="list-style-type: none"> - Use approved absorbent materials - Rotate team members to limit exposure - Maintain adequate ventilation in the area - Wear respiratory protection if required - Follow the MSDS for handling procedures - Ensure absorbents are applied evenly - Dispose of used absorbents in designated containers - Monitor workers for signs of fatigue 	2M
