Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Compressed air leaks, Slippery surfaces	3H	<ul style="list-style-type: none"> Inspect all equipment for potential leaks before use Ensure work area is dry and free from slippery substances Use safety signage to alert workers of potential hazards Conduct risk assessment of the task environment Schedule regular equipment maintenance Provide training on the specific task and associated risks Use spill-absorbent materials when necessary Ensure proper lighting in work area Implement an emergency response procedure Restrict access to authorised personnel only 	2M
2. Equipment Inspection	Worn out hoses, Faulty pressure gauges	3H	<ul style="list-style-type: none"> Regularly check hoses for wear and tear Replace any damaged or worn-out hose immediately Calibrate pressure gauges according to manufacturer standards Keep a logbook of equipment inspections Train personnel in identifying defects Apply protective coatings to prevent wear Store hoses correctly to avoid kinks and damage Use compatible fittings Label defective equipment promptly Ensure all equipment meets Australian Standards 	2M
3. Operating Compressor	Over-pressurisation, Inadequate ventilation	4A	<ul style="list-style-type: none"> Set pressure controls according to manufacturer's settings Monitor pressure levels consistently during operation Install pressure relief valves Keep compressor area well-ventilated Ensure all ventilation openings are unobstructed Implement mandatory breaks to handle equipment safely Automate systems where possible to minimize manual intervention Latch covers on all noisy equipment to reduce noise pollution 	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
