Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Tool malfunction, Inadequate PPE	3H	<ul style="list-style-type: none"> - Inspect and test all tools prior to use - Ensure all workers are equipped with necessary PPE - Conduct a pre-job briefing - Verify that all necessary permits are obtained - Limit access to work area to authorized personnel only - Mark the area with warning signs - Ensure first aid kit is available - Set up communication plan among team members - Review manufacturer's instructions for equipment - Ensure all workers are trained and competent 	2M
2. Isolation of Power	Electrical shock, Unexpected activation	4H	<ul style="list-style-type: none"> - Isolate power supply using lockout/tagout procedures - Verify isolation with testing equipment - Clear all isolation points - Use insulated tools and gloves - Appoint a qualified electrician to supervise the process - Ensure all personnel are trained in isolation procedures - Document isolation process - Perform a site inspection before the commencement - Communicate isolation plan to all team members - Confirm all equipment is de-energized 	2M
3. Removal of Old Compressor	Manual handling injury, Falling objects	3H	<ul style="list-style-type: none"> - Use mechanical lifting aids or equipment - Ensure team is trained in manual handling techniques - Plan lift path and clear obstacles - Secure the load properly to prevent movement - Use a spotter to guide the load - Restrict access to the lifting area - Wear appropriate PPE, including gloves and boots - Conduct a toolbox talk on safe lifting practices 	2M
