								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate planning, Lack of tools	3H	<ul style="list-style-type: none"> - Develop a detailed plan outlining all steps of the process - Ensure all appropriate tools are available and in good condition - Consult with experienced personnel to validate the plan - Update risk assessments in line with current conditions - Conduct a briefing session with all team members involved - Verify that all personnel understand the work plan and hazards - Schedule work during optimal conditions to minimise risk - Display safety notices in the work area - Ensure supervisory presence during critical steps - Allow for time for potential delays to avoid rushing 	2M
2. Site Inspection	Presence of debris, Uneven surfaces	3H	<ul style="list-style-type: none"> - Conduct a thorough inspection of the site prior to work commencement - Remove any debris or obstacles from the work area - Use tape to mark hazardous areas - Level out any uneven surfaces where possible - Identify and communicate any site-specific risks - Ensure walking paths are clear and safe - Provide personnel with appropriate PPE, such as steel-capped boots - Maintain clear communication through devices like radios - Document inspection findings and corrective actions - Implement temporary measures to address any unresolvable hazards 	2M
3. Securing Site	Unauthorised access, Inadequate barriers	3H	<ul style="list-style-type: none"> - Erect temporary fencing around the work area - Use signage to clearly delineate no entry zones - Implement a security protocol for unauthorised access - Setup barricading where necessary to prevent accidental entry - Install adequate lighting for visibility - Schedule security checks during the project - Ensure barriers are stable and in good condition - Use reflective or bright colours for barriers 	1L
