Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate safety equipment, Lack of knowledge	3H	<ul style="list-style-type: none"> - Ensure all team members have completed fire safety training - Double-check safety gear availability and condition - Review the building's fire safety plan - Brief team on potential fire hazards - Prepare an inventory of fire safety equipment - Check communication devices are functional - Obtain necessary permits and approvals - Assign roles and responsibilities - Plan regular safety drills - Verify understanding of emergency procedures 	2M
2. Risk Identification	Unidentified ignition sources Combustible materials	3H	<ul style="list-style-type: none"> - Conduct a thorough walkthrough of the facility - Identify and record all potential ignition sources - Assess the quantity and type of combustible materials - Maintain a detailed hazard log - Use a checklist for comprehensive evaluation - Ensure up-to-date labelling of hazardous areas - Utilise thermal imaging during assessments - Consult with a fire safety expert if needed - Limit access to high-risk areas - Schedule periodic risk identification reviews 	1L
3. Risk Assessment	Overlooked risk elements, Insufficient data	3H	<ul style="list-style-type: none"> - Use a standardised risk assessment form - Perform both qualitative and quantitative assessments - Include historical data and past incident reports - Evaluate impact and likelihood of identified risks - Rank risks in order of severity - Update assessment records regularly - Involve cross-functional teams - Validate assessment results with experts 	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
