								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Manual handling injuries, Slips and trips	3H	<ul style="list-style-type: none"> - Conduct a team briefing to outline tasks and safety protocols - Ensure all team members wear appropriate PPE including gloves and non-slip footwear - Conduct a site inspection to identify and rectify any slip and trip hazards - Ensure all tools and equipment are in good working order - Provide manual handling training to applicable staff - Ensure clear access to work area - Designate an area for material storage away from work pathways - Encourage team members to report hazards - Limit carrying distance for heavy or awkward loads - Use mechanical aids where possible 	2M
2. Material Delivery	Vehicle movement injuries, Falling objects	4H	<ul style="list-style-type: none"> - Designate clearly marked delivery areas away from working zone - Ensure delivery vehicles are equipped with reversing alarms and cameras - Appoint a spotter to guide vehicles during reversing - Use appropriate lifting equipment for unloading materials - Secure all materials on the vehicle before unloading - Implement use of high visibility vests for workers in delivery areas - Conduct delivery during low-activity periods if possible - Ensure all workers are aware of delivery schedule - Train workers on safe unloading methods - Regularly inspect lifting equipment for safety compliance 	2M
3. Site Setup	Contact with overhead services, Trip hazards	3H	<ul style="list-style-type: none"> - Conduct a site survey for overhead power lines - Install protective barriers around work area - Clearly mark pedestrian pathways and work zones - Use height restrictions for equipment adjacent to overhead services - Ensure all personnel are briefed on potential overhead hazards - Remove unnecessary materials and debris from site - Ensure all cords and cables are secured and do not impede walkways - Regularly review site layout for ongoing hazard prevention 	1L
