Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Chemical exposure, Slip hazard	4A	<ul style="list-style-type: none"> - Conduct a safety briefing before commencing work - Ensure all personnel have completed relevant H&S training - Check and wear appropriate PPE including gloves and goggles - Use non-slip mats in the laboratory area - Keep walkways clear of obstructions - Ensure Material Safety Data Sheets (MSDS) are accessible - Conduct a risk assessment specific to chemical handling - Check the integrity of personal protective equipment - Provide spill containment kits in the vicinity - Label and store chemicals correctly 	2M
2. Equipment Inspection	Electrical hazard, Mechanical failure	3L	<ul style="list-style-type: none"> - Inspect all electrical equipment for signs of damage - Ensure all machinery is serviced and maintained as per manufacturer instructions - Use equipment with a valid test tag - Implement a lockout-tagout system during maintenance - Train staff in the use of inspection tools - Ground all electrical equipment properly - Conduct regular safety audits - Use insulated tools where applicable - Verify calibration of testing equipment - Keep work area tidy to prevent accidents 	1L
3. Sample Collection	Sharps injury, Chemical spill	4A	<ul style="list-style-type: none"> - Use pipettes with safety features for sample collection - Train workers in safe sample handling techniques - Dispose of sharps in designated containers - Maintain a clean and organised work area - Utilize secondary containment for samples during transportation - Follow strict procedures for handling chemical reagents - Maintain a spill response plan - Ensure eyewash stations are operational and accessible 	2M
