								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips due to uneven ground, Falls from platform	3H	<ul style="list-style-type: none"> - Conduct a risk assessment of the ground conditions - Mark and clean the area before work begins - Ensure proper footwear is worn - Establish clear and safe access paths - Use stable ladders or platforms with guardrails - Provide training on falling hazard awareness and prevention - Regularly inspect working platforms for stability - Ensure adequate lighting in the work area - Post warning signs for wet or uneven surfaces - Monitor weather conditions and adjust plans accordingly 	2M
2. Handling of Equipment	Manual handling injuries, Entanglement with moving parts	4H	<ul style="list-style-type: none"> - Provide training on safe equipment handling techniques - Use mechanical aids or team lifts for heavy components - Maintain safe distance from moving machinery parts - Ensure all equipment guards are in place and functional - Lock out/tag out procedures before equipment inspection - Regular equipment maintenance to prevent malfunction - Wear close-fitted clothing and avoid loose items - Schedule regular rest breaks to prevent fatigue - Use personal protective equipment (PPE) like gloves - Implement a buddy system for tasks involving heavy lifting 	2M
3. Machine Setup	Crush injuries, Electrical shock	3H	<ul style="list-style-type: none"> - Follow the manufacturer's setup instructions precisely - Clear the area of all unauthorized personnel during setup - Use de-energizing procedures before making electrical connections - Install lockout/tagout systems during adjustments - Work in pairs to ensure safety during heavy lifting - Test electrical systems with a multimeter before energizing - Regular inspection of electrical cables and connections - Use insulated tools for electrical work 	1L
