								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips, trips and falls, Lacerations from tools	3H	<ul style="list-style-type: none"> - Conduct pre-start safety briefing - Ensure all workers have current site induction - Check and maintain tools for safe operation - Keep work area clean and free of trip hazards - Provide appropriate PPE: gloves, steel-toe boots, hard hats - Establish exclusion zones - Train workers in safe manual handling practices - Provide adequate lighting - Monitor weather conditions - Use slip mats in hazardous areas 	2M
2. Assessing the Structure	Structural instability, Falling debris	4H	<ul style="list-style-type: none"> - Conduct thorough structural assessment by qualified engineer - Mark potential hazard areas with warning signs - Create and enforce exclusion zones around unstable areas - Develop a demolition plan including method statements - Ensure communication devices are functional - Use spotters to monitor potential hazards - Ensure proper evacuation procedures are in place - Regular safety inspections during the process - Use drones for difficult-to-access areas when viable - Prioritize early dismantling of high-risk sections 	3H
3. Removing Fixtures	Electrical shock, Inhalation of dust	3H	<ul style="list-style-type: none"> - Ensure power is disconnected and locked out - Use dust suppressors or masks rated for dust - Ventilate the area effectively - Use insulated tools for electrical work - Provide task-specific PPE - Install temporary lighting if needed - Screen off work area with plastic sheeting - Use mechanical lifting aids to minimize manual handling 	2M
