THIS RISK ASSESSMENT IS APPROVED BY THE PCBU ON THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a RISK ASSESSMENT is prepared before the proposed work starts.

								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Identification of Requirements	Miscommunication of requirements, Inadequate understanding of safety standards	3H	<ul style="list-style-type: none"> - Conduct detailed consultation with stakeholders - Engage experts to define requirements - Utilize visual aids and examples for clarity - Verify requirements against current standards - Obtain sign-off from all parties involved - Conduct site visits to understand conditions - Regularly update stakeholders on progress - Implement communication protocols - Schedule workshops for requirement validation - Document and review all requirements thoroughly 	2M
2. Selection of Equipment	Inappropriate equipment selection, Non-compliant equipment	3H	<ul style="list-style-type: none"> - Conduct a comprehensive needs analysis - Engage accredited suppliers - Verify equipment compliance with standards - Consult with operators for practical insights - Inspect equipment before purchase - Review supplier documentation and certifications - Trial equipment where possible - Document selection process - Include maintenance requirements in selection - Ensure equipment meets all functional requirements 	1L
3. Design Risk Assessment	Unidentified design risks, Overlooking integration issues	4A	<ul style="list-style-type: none"> - Form a multidisciplinary risk assessment team - Apply risk assessment methodologies (e.g., HAZOP) - Document all identified risks - Conduct peer review of assessment findings - Engage independent experts for validation - Use simulations to test design - Regularly update risk registers - Prepare fallback strategies for identified risks 	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
