								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Preparation	Chemical spills, Inadequate PPE	3H	<ul style="list-style-type: none"> - Ensure all operators are trained in spill response procedures - Provide appropriate PPE including gloves, goggles, and aprons - Inspect and maintain spill kits regularly - Establish clear signage indicating spill response protocols - Store chemicals in properly labelled containers - Conduct regular safety briefings before operations - Monitor PPE usage and compliance - Conduct regular inspection of PPE integrity - Ensure proper ventilation in preparation area - Limit access to trained personnel only 	2M
2. Filling Dip Tank	Overfilling, Chemical spills	4H	<ul style="list-style-type: none"> - Use marked levels on dip tank to prevent overfilling - Provide drip trays for spillage - Utilize pumps with automatic shut-off controls - Ensure operators wear face shields - Train staff on correct filling techniques - Implement buddy system during filling - Position spill barriers strategically - Regularly maintain filling equipment - Establish communication protocols for spill emergencies - Conduct filling operations slowly and deliberately 	2M
3. Adding Chemicals	Chemical reaction, Fumes release	4A	<ul style="list-style-type: none"> - Use automated chemical feeders to reduce manual handling - Ensure availability of safety data sheets - Conduct regular hazard communication training sessions - Implement fume extraction systems - Utilize closed systems where possible - Equip operators with respirators if needed - Install gas detection alarms - Verify compatibility of chemicals before adding 	2M
