Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Incorrect PPE, Lack of communication	3H	<ul style="list-style-type: none"> - Ensure all personnel wear high-visibility vests and hard hats. - Conduct a pre-operation briefing to ensure all team members understand the task. - Use two-way radios for constant communication. - Designate a team leader responsible for coordinating activities. - Verify all equipment is in good condition and appropriate for the task. - Set up clear signage to delineate work areas. - Ensure adequate lighting for night operations. - Confirm emergency contacts are updated and accessible. - Instruct all personnel on the site's evacuation routes. - Double-check that all personnel have the required qualifications and training. 	2M
2. Scene Evaluation	Obstructed view, Unstable terrain	4H	<ul style="list-style-type: none"> - Assess the terrain for stability and potential hazards. - Establish a safe perimeter using barriers or cones. - Use ladders or elevated platforms for better scene overview. - Assign spotters to identify and report hidden hazards. - Utilise GPS for accurate location mapping. - Ensure that all equipment is positioned on stable ground. - Record initial observations for reference and planning. - Limit personnel access to essential staff only. - Conduct a thorough environmental scan for weather conditions. - Instruct personnel to tread carefully on uneven ground. 	3H
3. Traffic Diversion Setup	Improper signage, Driver confusion	3H	<ul style="list-style-type: none"> - Install large, clear directional signs for detours. - Use flashing lights on signage for increased visibility. - Arrange traffic cones to guide vehicles safely. - Deploy flaggers to manage traffic flow where necessary. - Provide written detour instructions to all transport operators. - Confirm that signs meet Australian standards. - Position barriers to prevent entry into dangerous areas. - Educate staff on correct placement of traffic signs. 	2M
