								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Lack of knowledge, Improper tools	3H	<ul style="list-style-type: none"> - Conduct thorough training on automation systems - Ensure only qualified personnel operate the tools - Verify tools are in good working condition - Implement a tool-check protocol before starting work - Review manufacturer's manuals and guidelines - Install adequate signage for awareness - Conduct a pre-work safety briefing - Ensure supervision by a senior technician - Implement a buddy system for new workers - Maintain a log of safety measures implemented 	2M
2. Site Inspection	Uneven surfaces, Obstructions	3H	<ul style="list-style-type: none"> - Conduct a visual inspection of the work area - Ensure proper lighting to enhance visibility - Remove all debris and unnecessary materials - Mark hazardous spots with warning signs - Use cones to delineate controlled zones - Deploy spotters to identify unexpected hazards - Regularly review the condition of the work surface - Ensure clear access to emergency exits - Document and communicate all identified hazards - Map out safe paths of movement 	2M
3. System Shutdown	Electrical shock, Unexpected startup	4A	<ul style="list-style-type: none"> - Implement lockout/tagout procedures - Confirm power is disconnected with appropriate tools - Use insulated tools and gloves - Inform all personnel of shutdown protocols - Post warning signs around the equipment - Use barrier tape to restrict access - Verify zero voltage using a multimeter - Conduct a safety briefing before disconnecting power 	2M
