								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before the task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	manual handling injuries, trip hazards	3H	<ul style="list-style-type: none"> - Conduct a site inspection to identify potential trip hazards - Use appropriate manual handling techniques - Train staff on correct lifting procedures - Ensure walkways are clear of obstructions - Use signage to alert workers to any potential flooring issues - Provide personal protective equipment (PPE) such as shoes - Ensure all vacuum equipment is in good working condition - Organise tools and equipment beforehand to prevent delays - Maintain communication among team members - Verify work area layout for efficient movement 	1L
2. Equipment Inspection	electrical faults, mechanical malfunction	3H	<ul style="list-style-type: none"> - Inspect vacuum for any visible damage before use - Check electrical cables for wear and tear - Ensure proper grounding of electrical equipment - Test equipment functionality before operation - Use tools that are tagged for electrical safety - Review equipment maintenance records - Calibrate the vacuum settings as per manufacturer's instructions - Replace any faulty parts immediately - Train staff on identifying electrical hazards - Ensure availability of a qualified technician 	1L
3. Assess Work Area	slip hazards, unobstructed pathways	3H	<ul style="list-style-type: none"> - Use appropriate wet floor signage - Remove any debris from pathways - Illustrate clear marked pathways for movement - Conduct daily assessments of the work environment - Use non-slip footwear - Inform staff about slippery surfaces - Encourage orderly arrangements of tools and materials - Perform housekeeping tasks regularly 	1L
