								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Preparation	Electric shock, Fire	3H	<ul style="list-style-type: none"> - Conduct a pre-job safety briefing - Ensure all tools and equipment are tested and tagged - Review and adhere to the Safe Work Method Statement (SWMS) - Wear appropriate PPE including rubber gloves and flame-resistant clothing - Check that first aid kits and fire extinguishers are available and accessible - Confirm that all workers are trained in emergency procedures - De-energise circuits before working on them - Use insulated tools - Follow lockout/tagout procedures - Maintain a clean and organised work area 	2M
2. Site Inspection	Trip hazards, Unstable structures	3H	<ul style="list-style-type: none"> - Conduct a thorough walkthrough of the area - Identify and mark unstable structures - Remove or mark potential trip hazards - Ensure adequate lighting - Use barricades to block off dangerous areas - Document findings - Alert all personnel of any significant hazards - Ensure site has clear access and egress - Use caution tape where necessary - Perform regular inspections during the work period 	2M
3. Tool Selection	Inadequate tools, Manual handling injuries	3H	<ul style="list-style-type: none"> - Ensure tools are fit for purpose - Verify insulation on electrical tools - Use power tools with enable-trip devices - Limit the need for manual handling - Provide tool caddies or holders to reduce lifting - Train workers in proper tool handling techniques - Schedule regular maintenance of tools - Replace damaged tools immediately 	1L
