								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Preparation	Absence of safety protocols, Inadequate training	3H	<ul style="list-style-type: none"> - Develop comprehensive safety protocols - Ensure all workers complete safety training sessions - Conduct regular audits on safety procedures - Provide detailed briefings before task commencement - Implement a buddy system for new workers - Use clear signage indicating safety measures - Conduct regular safety drills - Review and update safety procedures annually - Make safety resources easily accessible to employees - Encourage open communication about safety concerns 	2M
2. Assess Work Area	Dust generation, Poor ventilation	4H	<ul style="list-style-type: none"> - Inspect work area for dust sources - Ensure adequate ventilation is available - Plan tasks to reduce dust generation - Use barriers or partitions to contain dust - Employ industrial air purifiers - Conduct air quality tests - Schedule regular maintenance for ventilation systems - Limit access to high dust areas - Develop emergency evacuation procedures - Post clear signage in high-risk areas 	2M
3. Select Equipment	Use of incorrect equipment, Equipment malfunction	3H	<ul style="list-style-type: none"> - Verify equipment specifications match task requirements - Undertake regular equipment maintenance checks - Use only certified and calibrated equipment - Implement a checklist for equipment inspection - Ensure easy access to equipment manuals - Provide training on equipment usage - Establish an equipment maintenance log - Store equipment properly after use 	2M
