Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative		
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE		
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.		
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>		
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Incorrect tools selection, Inadequate training	3H	<ul style="list-style-type: none"> - Ensure all workers have completed relevant training and qualifications - Conduct toolbox talk to emphasize proper tool selection - Provide documentation and manuals for reference - Inspect tools and equipment for functionality - Conduct risk assessment prior to task commencement - Brief team on emergency procedures - Provide designated storage for tools - Establish communication protocols - Verify all documentation is current - Assign roles and responsibilities clearly 	2M
2. Site Inspection	Slips and falls, Unstable ground	3H	<ul style="list-style-type: none"> - Conduct a thorough site inspection before work begins - Identify and mark any hazardous areas - Conduct ground stability tests - Ensure adequate lighting on site - Use barricades to cordon off dangerous areas - Encourage use of non-slip footwear - Maintain a clean and tidy work area - Provide adequate signage to warn of hazards - Implement a buddy system during inspection - Schedule regular inspection updates 	2M
3. Power Shutdown	Electrical shock, Improper isolation	4A	<ul style="list-style-type: none"> - Follow a lockout/tagout procedure - Use isolation warning tags - Verify isolation using an approved tester - Communicate shutdown procedure to all personnel - Ensure authorised personnel only to conduct isolation - Wear insulated gloves and protective gear - Keep emergency contact numbers accessible - Re-confirm de-energisation before proceeding 	2M
