								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slippery surfaces, Unauthorized access	3H	<ul style="list-style-type: none"> - Conduct a thorough risk assessment before commencing work - Ensure all personnel are trained in safety protocols - Designate and secure the fuelling area with barriers - Install signage for authorised personnel only - Conduct safety briefing to outline hazards - Provide adequate lighting in fuelling areas - Ensure spillage trays are readily accessible - Verify communication devices are operational - Confirm required personal protective equipment is worn - Implement a buddy system for observation 	2M
2. Checking Fuel Quality	Contaminated fuel, Chemical exposure	3H	<ul style="list-style-type: none"> - Use appropriate protective equipment including gloves and goggles - Train staff in fuel quality testing procedures - Ensure sampling tools are properly calibrated - Isolate sampling area from unrelated operations - Store fuel samples in designated secure locations - Engage only trained personnel for testing tasks - Establish protocol for handling and disposing contaminated fuel - Use spill trays beneath sampling stations - Monitor environmental conditions affecting sampling - Communicate all findings directly to supervisors 	2M
3. Connecting Equipment	Electrocution, Tripping hazards	4A	<ul style="list-style-type: none"> - Conduct visual inspections of all electrical equipment before use - Ensure grounding devices are properly installed - Keep all equipment and cords inspected to be intact and secured - Employ cable covers or mats to manage cords crossing walkways - Clearly demarcate areas with warning signs - Train personnel on safe handling of electrical equipment - Use non-conductive equipment when possible - Disconnect power supply when equipment is not in use 	2M
