								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slip from wet surfaces, Cut from broken glass	3H	<ul style="list-style-type: none"> - Ensure floor is dry before starting - Use appropriate footwear with non-slip soles - Conduct a walk-through to identify broken glass - Wear cut-resistant gloves - Maintain adequate lighting in the work area - Clearly mark any wet or hazardous zones - Ensure all personnel are appropriately trained - Provide safety briefings prior to shift commencement - Read all personal protective equipment (PPE) before entry - Designate a safety officer to monitor conditions 	2M
2. Collect Glass	Back strain from lifting, Puncture wounds from sharp edges	3H	<ul style="list-style-type: none"> - Use trolleys or mechanical aids for heavy loads - Train staff on proper lifting techniques - Limit the height of loads to safe levels - Utilize puncture-resistant gloves - Implement buddy lifting system for awkward items - Ensure frequent rest breaks - Keep pathways clear of obstacles - Conduct regular toolbox talks on safe handling - Store containers ergonomically accessible - Use signage to indicate glass collection areas 	2M
3. Transport to Sorting Area	Collision with workers, Spillage leading to slip hazards	4A	<ul style="list-style-type: none"> - Establish dedicated pathways for glass transport - Implement pedestrian separation via barriers - Use clearly visible markings on transport routes - Conduct regular vehicle maintenance - Train operators on safe vehicle operation - Ensure spill kits are accessible - Perform regular spill response drills - Post clear speed limits within facility 	2M
