Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Incomplete site assessment, Unclear utility maps	3H	<ul style="list-style-type: none"> - Conduct a detailed site survey - Request up-to-date utility service maps - Verify utility locations with non-destructive logging - Communicate survey results to all team members - Train workers to recognise utility markings - Schedule regular safety meetings - Keep emergency contact numbers accessible - Develop contingency plan for utility strikes - Use ground-penetrating radar to confirm utility locations - Provide adequate briefing on site safety protocols 	2M
2. Marking Utility Lines	Incorrect utility marking and maps	3H	<ul style="list-style-type: none"> - Use updated service maps strictly during marking - Engage experienced personnel for marking - Validate marks with multiple verification techniques - Provide ongoing training to workers - Revise utility maps regularly - Ensure clarity and visibility of markers - Confirm map accuracy with utility companies - Conduct spot checks to ensure compliance - Implement an auditing system for markings - Inform workers of utility line locations 	2M
3. Excavation	Subsurface utility damage, Cave-ins	4A	<ul style="list-style-type: none"> - Employ a spotter to assist operator - Use vacuum excavation near utilities - Monitor excavation depth closely - Employ benching and shoring as required - Continuously assess soil stability - Ensure equipment is well-maintained - Limit excavation size to reduce risks - Train operators in careful digging techniques 	3H
