Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Dust exposure, Skin irritation	3H	<ul style="list-style-type: none"> - Conduct safety briefing for all personnel - Ensure all workers are trained in handling fiberglass - Use appropriate signage to indicate hazard areas - Inspect and prepare PPE for use - Restrict access to work area to authorised personnel only - Ensure ventilation systems are operational - Confirm emergency procedures are communicated - Schedule regular breaks for workers - Have first aid kits readily available - Use vacuum systems to reduce dust spread 	2M
2. Cutting Fiberglass Sheets	Sharp edges, Inhalation of fibers	4H	<ul style="list-style-type: none"> - Use appropriate cutting tools with guards - Ensure workers wear cut-resistant gloves - Employ respiratory protection equipment - Establish exclusion zone around the cutting area - Use water mist to suppress fiber release - Implement a buddy system to monitor processes - Ensure first aid response team is ready - Conduct regular equipment maintenance checks - Place warning signs in visible locations - Limit cut sizes to reduce handling risks 	3H
3. Transporting Material	Material splinters, Back injury	3H	<ul style="list-style-type: none"> - Use mechanical aids for transport - Train workers in proper lifting techniques - Provide protective sleeves for materials - Ensure pathways are clear of obstructions - Use team lifts for heavy items - Equip workers with anti-slip footwear - Regularly inspect transport routes for safety - Use trolleys with brakes for stability 	2M
