Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inhalation of asbestos fibres, Exposure to hazardous dust	4A	<ul style="list-style-type: none"> - Conduct an asbestos assessment to identify contaminated materials - Inform workers of asbestos presence and risks involved - Establish a controlled asbestos work area with signs - Limit access to authorized personnel only - Ensure all workers use Personal Protective Equipment (PPE) - Provide training in safe asbestos handling techniques - Install HEPA-filtered ventilation in work area - Implement strict decontamination procedures - Inform neighboring properties about asbestos work - Schedule work during low occupancy times 	2M
2. Establish Work Area	Unauthorized entry, Spread of asbestos fibres	4M	<ul style="list-style-type: none"> - Set up physical barriers around work area - Display asbestos hazard warning signs - Use plastic sheeting to isolate the work area - Establish entry and exit protocols - Assign a trained supervisor to monitor the site - Ensure emergency exits are accessible - Restrict access to trained personnel only - Regularly inspect barriers for integrity - Conduct briefing to review barrier placement - Use air sampling equipment to monitor asbestos levels 	2M
3. Select Personal Protective Equipment (PPE)	Improper PPE usage, Exposure to asbestos via skin contact	3H	<ul style="list-style-type: none"> - Select appropriate PPE including masks, suits, and gloves - Conduct PPE fit-test for all workers - Train workers in proper usage and disposal of PPE - Provide PPE free of charge to all onsite workers - Ensure PPE is asbestos-rated and approved - Regularly inspect PPE for damage or wear - Have backup PPE available - Maintain a log of PPE issuance and training 	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
