Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before the task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative		
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE		
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.		
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.		
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	slips, trips	3H	<ul style="list-style-type: none"> Ensure clear walking paths and remove any obstacles Conduct site induction to identify potential hazards Ensure proper lighting Use caution signage where necessary Ensure all equipment is functioning properly Conduct pre-start briefing Schedule work during low traffic periods Ensure all workers are trained for the task Review site conditions regularly Consider weather impacts on site conditions 	2M
2. Moving Drywall Sheets to Site	manual handling injuries, equipment collision	4H	<ul style="list-style-type: none"> Use mechanical lifting tools wherever possible Ensure pathways are clear before moving Use proper lifting techniques Allocate sufficient manpower for lifting Coordinate with other workers to avoid collisions Wear personal protective equipment Conduct manual handling training Inspect routes for stability and clearances Use spotters during movement of sheets Plan moves to avoid congested times 	2M
3. Measuring Wall Area	inaccurate measurements, working at heights	3H	<ul style="list-style-type: none"> Use laser measuring tools for accuracy Double check measurements before cutting Use a stable ladder for any elevated work Ensure proper fall protection near edges Mark the measuring area clearly Wear appropriate fall protection gear Have a spotter for ladder work Use marked measuring tapes 	1L
