Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative		
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE		
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.		
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.		
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips, trips, and falls, Incorrect tool usage	3H	<ul style="list-style-type: none"> - Inspect area for clear workspace before commencing work. - Gather necessary tools and equipment, ensuring they are in good condition. - Provide workers with training on correct tool usage. - Ensure appropriate PPE (Personal Protective Equipment) is worn, including sturdy footwear. - Conduct a pre-start briefing to discuss hazards. - Identify and mark any potential trip hazards in the work area. - Maintain housekeeping to prevent clutter. - Ensure adequate lighting in the workspace. - Use anti-slip mats or coverings where necessary. - Confirm that the work area is dry and free from hazards. 	2M
2. Conduct Equipment Check	Equipment failure, Tools and equipment injury	3H	<ul style="list-style-type: none"> - Perform routine maintenance on the fifth wheel using a checklist. - Verify that all tools are suitable for the task and in good condition. - Replace any faulty equipment or tools immediately. - Train employees on reporting equipment issues. - Ensure all safety devices on the equipment are functional. - Schedule regular inspections of the fifth wheel by a qualified technician. - Keep accurate records of maintenance and inspections. - Review the manufacturer's instructions for the equipment. - Ensure workers have completed required competency training. - Implement a lockout/tagout procedure for decommissioned equipment. 	2M
3. Handle and Position the Trailer	Crushing injuries, Manual handling injuries	4A	<ul style="list-style-type: none"> - Use mechanical aids such as pallet jacks to move the trailer where possible. - Train staff on manual handling techniques to mitigate risk. - Assign adequate personnel to lift heavy components in teams rather than individuals. - Ensure all loads are secure before attempting to move them. - Use wheel chocks to prevent unintentional trailer movement. - Conduct dynamic risk assessment immediately before handling. - Mark out designated walking and movement zones. - Ensure the ground surface is even and stable. 	2M
