								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Unfamiliarity with load, Improper planning	3H	<ul style="list-style-type: none"> - Conduct a risk assessment specific to the load before securing. - Review load characteristics and documentation. - Communicate the plan to all involved parties. - Ensure risk assessment is complete and approved by a competent person. - Provide necessary training for personnel on load securing procedures. - Consult transport operators for special load requirements. - Establish communication protocols for changes to the loading plan. - Use a load checklist to confirm prepared status. - Perform a site inspection for any obstacles. - Verify emergency procedures are up-to-date. 	2M
2. Selection of Securing Equipment	Using inadequate equipment, Faulty securing devices	4H	<ul style="list-style-type: none"> - Select equipment suitable for the load type and weight. - Check securing devices for damage or wear. - Ensure equipment is certified for use and inspect certificates. - Use rated and approved securing devices only. - Regularly inspect and maintain securing devices. - Train staff in the correct equipment selection. - Implement a tagging system for faulty equipment. - Cross-check equipment against load requirements. - Use redundancy in securing equipment where required. - Develop a procedure for reporting defects. 	2M
3. Positioning the Load	Load shift, Imbalance	4A	<ul style="list-style-type: none"> - Align load to the vehicle's centre of gravity. - Use guide marks to ensure correct positioning. - Implement standard operating procedures for load positioning. - Utilise adjustable supports or stabilisers when required. - Train personnel in load balance principles. - Use dunnage to prevent contact with structures. - Avoid placing loads on top of others unless secured. - Deploy spotters to supervise the positioning. 	2M
