								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Cross-contamination, Inadequate PPE	3H	<ul style="list-style-type: none"> - Conduct training on infection control policies and procedures - Issue personal protective equipment (PPE) to staff - Verify PPE fit and quality before use - Establish designated zones for contaminated and clean equipment and materials - Review hand hygiene protocols with staff - Implement signage to indicate hygiene and PPE requirements - Verify the availability of hand sanitizer at all entry and exit points - Develop a checklist for readiness verification - Ensure staff are aware of emergency protocols - Restrict access to high-risk areas only to essential personnel 	2M
2. Identify Potential Sources	Microbial contamination, Biohazard exposures	3H	<ul style="list-style-type: none"> - Identify all potential sources of infection in the workspace - Map routes of entry and exposure risks - Eliminate non-essential sources - Implement microbiological testing of the environment - Use barriers to limit exposure to biohazards - Display visible warning signs in areas of concern - Train staff on hazard identification - Audit the site for potential exposure zones - Ensure isolation of high-risk areas - Conduct regular inspections and update risk assessments 	1L
3. Implement Cleaning Protocols	Incomplete disinfection, Chemical exposure	3H	<ul style="list-style-type: none"> - Develop a cleaning schedule for all areas - Use approved and effective disinfectants - Train cleaning staff on proper disinfection techniques - Ensure use of appropriate PPE by cleaning staff - Dispose of cleaning waste in sealed, marked containers - Conduct spot checks to verify efficacy of cleaning - Rotate cleaning agents to prevent resistance - Maintain a log of cleaning activities 	2M
