Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Trip Hazards from Tools and Equipment, Eye Injury from Dust	3H	<ul style="list-style-type: none"> - Ensure work area is clear of unnecessary tools and equipment - Wear appropriate PPE including safety glasses and dust masks - Brief installation team on safety procedures - Inspect work area for potential trip hazards before starting work - Use signage to indicate work in progress - Ensure proper lighting is available - Conduct a toolbox talk raising hazard awareness - Remove any unnecessary cables - Maintain good housekeeping - Conduct pre-installation safety check 	2M
2. Tools and Equipment Inspection	Electric Shock from Damaged Tools, Injury from Malfunctioning Equipment	3H	<ul style="list-style-type: none"> - Inspect all tools and equipment for damage before use - Ensure equipment is properly maintained and functional - Verify PAT testing is up to date for electrical tools - Use tools in accordance with manufacturer guidelines - Ensure all operators are trained and competent - Remove damaged tools from service immediately - Use RCD protection with power tools - Check battery-operated tools are charged and in good condition - Ensure tool guards are in place - Lock out any defective equipment 	2M
3. Site Survey	Injury from Uneven Surfaces, Falling Objects	2M	<ul style="list-style-type: none"> - Conduct a site walk-through to identify potential hazards - Ensure all personnel are wearing hard hats and safety vests - Use caution tape to mark uneven surfaces - Place barriers around high-risk areas - Carry out visual checks for overhead hazards - Communicate with other site personnel about work activities - Ensure all equipment brought onsite is properly secured - Use designated pathways where possible 	1L
