								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Incorrect personal protective equipment, Inadequate training	3H	<ul style="list-style-type: none"> - Conduct pre-operational checklist - Ensure PPE such as gloves, safety boots are available and used - Provide training on gas cylinder handling - Inspect cylinders for damage before handling - Verify cylinder contents via labels - Ensure workers understand risks and handling procedures - Schedule regular refresher training - Review emergency procedures - Provide first aid kit on site - Confirm communication protocol 	2M
2. Assess Load	Overloading, Inaccurate assessment of cylinder size	3H	<ul style="list-style-type: none"> - Assess the weight of cylinders to be lifted - Use cylinder chart for size reference - Identify appropriate handling equipment - Ensure mechanical aids are suitable for the task - Consult team for collective assessment - Schedule maintenance for weighing devices - Limit load to safe handling capacity - Double-check assessments before starting lift - Consider environmental factors like floor strength - Avoid assumptions without verification 	2M
3. Plan Path	Obstructed pathways, Unstable surfaces	3H	<ul style="list-style-type: none"> - Inspect and clear path of obstacles - Plan route considering shortest and safest path - Identify and mark any hazardous zones - Ensure pathways are clear and well-lit - Provide warning signage - Schedule regular inspections of the path - Use barriers to direct path if needed - Communicate route plan to team 	1L
