						1L LOW	Monitor and keep records.	PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Inspection	Mould spores release, Damp surfaces	3H	<ul style="list-style-type: none"> - Conduct thorough initial building walk-through to identify moisture. - Utilise moisture metres for hidden moisture issues. - Document findings and photographs of affected areas. - Wear PPE including masks and gloves. - Ensure adequate ventilation during inspection. - Use portable lighting to enhance visibility. - Schedule inspection during dry weather if possible. - Review building maintenance history. - Engage qualified inspector for suspected severe issues. - Communicate potential risks to all parties involved. 	2M
2. Damp Assessment	Undetected leaks, Rising damp	3H	<ul style="list-style-type: none"> - Inspect plumbing and roofing for leaks. - Use infrared cameras for hidden moisture. - Conduct hygrometer readings in all moist-prone areas. - Engage a licensed plumber if leaks are detected. - Evaluate drainage and gutter systems. - Document all findings in detailed report. - Ensure electrical items are away from damp. - Regularly review weatherproofing measures. - Communicate with building manager regarding findings. - Ensure follow-up assessments are scheduled. 	2M
3. Immediate Remedial Actions	Exposure to chemicals, Slip hazards	3H	<ul style="list-style-type: none"> - Utilise appropriate spill kits for chemical leaks. - Implement temporary barriers around remedial work. - Ensure signage alerting to wet floors is conspicuous. - Adequate PPE for chemical exposure including respirators. - Allow only trained personnel to handle chemicals. - Use non-toxic or eco-friendly chemicals wherever possible. - Monitor humidity levels during works. - Ensure ventilation systems are operational during cleaning. 	2M
