Risk Rating & Required Action:

4A	Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.
3H	Review and approve additional controls before task starts. Senior supervisor sign-off needed.
2M	Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.
1L	Proceed, following standard operating procedures. Monitor and keep records.

Consequence Scale:

Consequence	People (injury/illness)	Project / Assets	Compliance / Reputation
Catastrophic	Fatality or permanent total disability	project shutdown	Significant regulator intervention; criminal prosecution
Major	Serious injury/illness (hospital > 5 days)	critical delay	Improvement notice; major media coverage
Moderate	Medical-treatment injury; lost-time > 1 day	moderate delay	Minor breach; adverse client comment
Minor	First-aid only, no lost time	negligible delay	Isolated non-conformance
Insignificant	No injury	no schedule impact	Deviation caught and corrected on site

Notes on Hierarchy of Controls:

Remember to apply controls in the preferred order shown by the coloured pyramid:

- Eliminate**
- Substitute
- Isolate
- Engineering
- Administrative
- PPE

Always document **why** a lower-order control is accepted if elimination or substitution is not reasonably practicable.

1. Preparation	Slippery surfaces, Exposure to mould spores	3H	<ul style="list-style-type: none"> - Ensure PPE is ready and appropriate for use, including masks and gloves - Use non-slip mats or footwear where necessary - Train staff on handling and safety protocols - Control access to the affected area - Prepare ventilation equipment to improve air circulation - Inform all workers of the potential hazards - Schedule frequent breaks to minimise exposure - Conduct a task risk assessment before work begins - Mark the area with warning signs - Ensure first aid kit is accessible 	2M
2. Site Assessment	Contact with contaminated surfaces, Inadequate risk identification	3H	<ul style="list-style-type: none"> - Use PPE when inspecting the site - Conduct a thorough visual inspection for mould growth - Document the location and extent of mould - Identify potential sources of moisture - Evaluate the condition of building materials - Use moisture meters to detect hidden sources of moisture - Consult with environmental specialists if needed - Use digital tools to map the extent of mould - Communicate findings clearly with the team - Review previous assessments or reports for reference 	1L
3. Isolation of Area	Spread of mould spores, Unauthorized access	3H	<ul style="list-style-type: none"> - Use plastic sheeting or barriers to isolate the area - Seal off HVAC systems to prevent spore distribution - Post 'Do Not Enter' signs - Install HEPA filters in enclosed areas - Arrange alternate pathways for foot traffic - Use zipper doors where entry is necessary - Implement a sign-in/out sheet for entering the area - Train staff on area isolation protocols 	2M
