								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	lack of planning, absence of safety equipment	3H	<ul style="list-style-type: none"> - Conduct a thorough risk assessment prior to load movement - Ensure safety equipment is available and suitable for the task - Develop a detailed load movement plan - Train staff on safe handling procedures - Allocate roles and responsibilities - Check all paths are clear of obstacles - Review weather conditions and adjust plans accordingly - Conduct toolbox talk with team prior to task commencement - Verify license and qualifications of operators - Include emergency response plan in preparation 	2M
2. Equipment Check	faulty equipment, insufficient maintenance	3H	<ul style="list-style-type: none"> - Inspect equipment before use - Ensure equipment maintenance is up to date - Verify weight limits for lifting equipment - Check all communication devices are functioning - Conduct visual checks on slings and shackles - Replace damaged equipment immediately - Ensure appropriate equipment for load size - Maintain equipment logs - Train staff on equipment use - Schedule regular equipment maintenance checks 	1L
3. Load Securing	improper load securing, slipping loads	3H	<ul style="list-style-type: none"> - Use appropriate securing methods for the load - Verify load is balanced before movement - Conduct a second check by another worker - Use certified securing devices - Train workers in load securing techniques - Regularly review securing procedures - Use load movement diagrams for precise securing - Conduct securement checks at intervals 	2M

A large, light blue rectangular area containing a grid of horizontal bars. The bars are black and vary in length, representing data points. A large, diagonal watermark reading 'SAMPLE' is overlaid across the entire image.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
