Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	tripping, overexertion	3H	<ul style="list-style-type: none"> - Ensure the pathway is clear of obstacles before starting. - Conduct a safety briefing to discuss lifting techniques. - Check all equipment for defects before use. - Wear appropriate PPE: gloves, steel-capped boots. - Use trolleys or dolly carts for heavy items. - Do a warm-up to prevent muscle strain. - Make sure the designated path is dry. - Assign roles clearly among team members. - Limit the number of pots moved at one time. - Ensure communication systems are working. 	2M
2. Selecting the Pot	manual handling, awkward posture	3H	<ul style="list-style-type: none"> - Use mechanical aids or ask for assistance. - Bend at the knees when lowering body. - Check the pot's weight before attempting to lift. - Utilise proper lifting techniques: keep back straight. - If necessary, break tasks into smaller parts. - Verify that the pot isn't too heavy or unstable. - Wear supportive shoes with suitable grip. - Ensure team members are positioned correctly to lift. - Plan the lift and route before starting. - Avoid sudden jerky motions during lifting. 	2M
3. Lifting the Pot	muscle strain, uneven weight distribution	4A	<ul style="list-style-type: none"> - Use a correct and stable lifting posture. - Lift slowly and gently, without twisting. - Use mechanical aids where possible. - Do not lift heavy pots alone; use team lifting. - Prepare yourself mentally for each lift. - Monitor for signs of fatigue in team members. - Restrict lift to shoulder height only. - Ensure each lifter is capable of handling their share of weight. 	2M
