								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips and trips, Improper equipment use	3H	<ul style="list-style-type: none"> - Conduct a pre-work briefing to discuss tasks and potential hazards - Ensure work area is clear and clean to prevent slips and trips - Verify that equipment is suitable and in good condition - Provide training on correct equipment usage - Use personal protective equipment (PPE) such as gloves and safety shoes - Ensure adequate lighting in the work area - Implement a system for reporting hazards promptly - Maintain a clear and unobstructed access to exits - Control entry to the work site to authorized personnel only - Conduct regular inspections of tools and equipment 	2M
2. Setup Equipment	Incorrect setup, Electrical hazards	3H	<ul style="list-style-type: none"> - Follow manufacturer's instructions for equipment setup - Use correct tools for assembly - Inspect cords and plugs for damage before use - Use equipment that is tagged and tested - Employ an experienced technician for setup - Ensure proper earthing of electrical equipment - Display clear signage indicating equipment in use - Provide suitable training on equipment assembly - Require a second-person check of setup - Install ground-fault circuit interrupters (GFCIs) 	1L
3. Connecting Gas Cylinders	Gas leakage, Explosion	4A	<ul style="list-style-type: none"> - Use gas detectors to identify leaks - Check cylinder integrity and valve functionality - Apply correct torque to connections using calibrated tools - Conduct a pressure test post connection - Train staff in emergency shutdown procedures - Use appropriate signage indicating gas type - Ensure all connections are visible and accessible - Implement routine maintenance and inspections 	2M
