Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	incorrect tools, poor communication	3H	<ul style="list-style-type: none"> - Ensure all necessary tools are available and in good condition - Conduct a pre-task briefing to communicate roles and responsibilities - Check work instructions are available and understood by all workers - Verify all workers are trained in required procedures - Use checklists to confirm preparation steps are completed - Establish communication methods in advance - Designate a supervisor/oversight - Implement a system for reporting issues immediately - Arrange for external expert consultation if required - Ensure adequate lighting in the work area 	2M
2. Isolation of Engine	unexpected engine start, leakage	3H	<ul style="list-style-type: none"> - Use lockout/tagout procedures - Drain all fluids according to guidelines - Confirm that all energy sources are isolated - Use warning signage on equipment - Ensure only authorised personnel access the area - Verify isolation procedures with a second worker - Implement a checklist for complete isolation tasks - Provide spill kits and train staff in use - Periodically review isolation procedures - Maintain a logbook of isolation activities 	1L
3. Engine Removal	manual handling injuries, equipment failure	4A	<ul style="list-style-type: none"> - Use mechanical aids to lift heavy components - Train workers in proper lifting techniques - Inspect lifting equipment before use - Conduct a risk assessment for the lifting plan - Ensure clear communication among the team - Implement a buddy system for manual tasks - Use personal protective equipment (PPE) - Mark out the work area and restrict access 	2M
