Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before the task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate planning, Incorrect equipment setup	3H	<ul style="list-style-type: none"> - Conduct thorough site inspection to assess ground conditions - Ensure all personnel are trained on equipment setup procedures - Confirm communication plan is in place for all team members - Prepare necessary tools and equipment required for the task - Verify all equipment is in good working condition prior to use - Designate a knowledgeable team leader for oversight - Create an emergency response plan specific to support failures - Identify all overhead hazards such as power lines or unstable structures - Ensure all team members wear appropriate personal protective equipment (PPE) - Keep first aid kits readily accessible 	2M
2. Transport Equipment to Site	Load instability, Traffic incidents	3H	<ul style="list-style-type: none"> - Secure all equipment properly for transport to prevent movement - Use suitable vehicles with adequate restraint systems - Plan transport routes to avoid high traffic areas - Use spotters to assist with large or difficult items - Train drivers on defensive driving practices - Ensure all transported equipment is within vehicle load limits - Monitor weather conditions and delay if necessary for safety - Apply high-visibility markings to the transport vehicle - Conduct pre-trip vehicle inspections to ensure roadworthiness - Ensure all road rules and regulations are adhered to at all times 	2M
3. Site Inspection	Unstable ground, Presence of underground services	3H	<ul style="list-style-type: none"> - Conduct a thorough ground stability test in intended work area - Use ground penetrating radar or other technology to identify underground services - Mark identified underground services clearly on site - Liaise with authority representatives for clearance confirmation - Ensure work barriers and exclusion zones are established and communicated - Conduct a full hazard assessment of the site before starting - Use dust suppression techniques if required - Ensure site access points are secured to prevent unauthorized entry 	1L
