								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Incorrect posture, Inadequate training	3H	<ul style="list-style-type: none"> - Provide training on correct posture and lifting techniques - Conduct regular refresher courses - Use visual aids to demonstrate proper techniques - Assess worker competency through observation - Develop a training schedule - Ensure training is conducted by qualified personnel - Include information on risk factors for back injuries - Make training compulsory for all new employees - Provide training in multiple languages if necessary - Record training attendance and comprehension 	2M
2. Risk Assessment	Unidentified hazards, Inaccurate risk evaluation	3H	<ul style="list-style-type: none"> - Conduct a thorough walk-through of the work area - Identify all potential hazards - Review incident reports and injury records - Involve workers in the risk assessment process - Use a checklist to ensure all hazards are considered - Evaluate the likelihood and consequence of each hazard - Use risk assessment software for accuracy - Verify findings with a supervisor or safety officer - Update risk assessments annually or when changes occur - Document the risk assessment process 	1L
3. Workstation Ergonomics	Poor workstation setup, Inadequate adjustment options	4A	<ul style="list-style-type: none"> - Provide adjustable chairs with lumbar support - Ensure desks are at the correct height - Implement sit-stand workstations where applicable - Encourage regular movement and breaks - Assess workstation setup during initial setup and regularly thereafter - Involve a physiotherapist in workstation design - Provide guides for employees to adjust their own workstations - Supply ergonomic accessories such as footrests and wrist supports 	2M
