Risk Rating & Required Action:

4A	Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.
3H	Review and approve additional controls before task starts. Senior supervisor sign-off needed.
2M	Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.
1L	Proceed, following standard operating procedures. Monitor and keep records.

Consequence Scale:

Consequence	People (injury/illness)	Project / Assets	Compliance / Reputation
Catastrophic	Fatality or permanent total disability	project shutdown	Significant regulator intervention; criminal prosecution
Major	Serious injury/illness (hospital > 5 days)	critical delay	Improvement notice; major media coverage
Moderate	Medical-treatment injury; lost-time > 1 day	moderate delay	Minor breach; adverse client comment
Minor	First-aid only, no lost time	negligible delay	Isolated non-conformance
Insignificant	No injury	no schedule impact	Deviation caught and corrected on site

Notes on Hierarchy of Controls:

Remember to apply controls in the preferred order shown by the coloured pyramid:

- Eliminate**
- Substitute**
- Isolate**
- Engineering**
- Administrative**
- PPE**

Always document **why** a lower-order control is accepted if elimination or substitution is not reasonably practicable.

1. Preparation	Slips and trips, Exposure to dust	3H	- Ensure a clean and organised workspace before starting - Use proper footwear with non-slip soles - Wear dust masks and safety goggles - Regular cleaning schedules to reduce dust build-up - Install adequate lighting to improve visibility - Conduct safety briefings for all personnel - Maintain a clear path for movement - Implement a no running policy in the workshop - Use signage to warn of any hazards - Regular checks and maintain all equipment	1L
2. Selecting Materials	Manual handling injuries, Incorrect selection	3H	- Use mechanical aids and teamwork for heavy lifting - Train staff in proper lifting techniques - Implement a colour coding system for different materials - Verify materials meet specifications before use - Regularly review material selection protocols - Conduct ergonomic assessments - Rotate tasks among workers to avoid fatigue - Clearly label all materials - Provide easy access to material data sheets - Regular inspections of storage areas to ensure safety	2M
3. Cutting Timber	Blade contact, High noise levels	4A	- Use guards and safety devices on cutting equipment - Train workers in safe operation of saws - Provide and enforce the use of personal protective equipment (PPE) - Regular maintenance and safety checks of cutting equipment - Implement lockout/tagout procedures during maintenance - Post prominent warning signs around cutting areas - Use hearing protection to mitigate noise exposure - Ensure only trained personnel operate cutting equipment	2M
