Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate knowledge of lifting techniques, Improper lifting gear	3H	<ul style="list-style-type: none"> Conduct training sessions on proper lifting techniques Provide visual guides or posters illustrating correct posture Ensure access to appropriate lifting gear for all employees Regularly check lifting gear for maintenance issues Brief workers daily on safe lifting practices Allocate sufficient time for tasks to avoid rushing Assess workload to determine appropriate personnel allocation Ensure new employees are inducted on lifting safety protocols Incorporate lifting practice in regular drills Involve workers in risk assessment discussions 	2M
2. Assess Load Characteristics	Misjudging load weight, Identifying unstable loads	4H	<ul style="list-style-type: none"> Weigh loads using appropriate scales Mark load weight visibly on packaging Train workers in hazard identification related to load stability Use team-based approaches for large and awkward loads Encourage workers to ask for help if unsure about load safety Provide information and training on load assessment factors Rotate tasks to prevent fatigue in load assessment tasks Develop a load safety checklist for quick reference Install safety signage in areas where loads are stored Utilise ergonomic assessments where applicable 	2M
3. Plan Lifting and Carrying Route	Obstructed pathways, Uneven surfaces	3H	<ul style="list-style-type: none"> Clear pathways of obstructions before starting lift Mark uneven surfaces with visible tape Conduct regular inspections to identify new hazards Use appropriate lighting to illuminate pathways Plan and communicate routes before commencing task Apply temporary signage for known hazards along routes Provide appropriate footwear to prevent slips and trips Use lifting aids for long distance carries 	1L
