Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips and trips, Incorrect use of tools	3H	<ul style="list-style-type: none"> - Conduct a pre-task briefing to ensure everyone understands the process - Inspect work area for any slip or trip hazards and remove them - Ensure all personnel have appropriate Personal Protective Equipment (PPE) - Use signage to indicate work in progress - Ensure tools are in good condition and suitable for the task - Provide training on correct tool usage - Establish a communication plan for the team - Assign roles and responsibilities clearly - Ensure adequate lighting in the work area - Verify access routes are clear 	2M
2. Site Access	Unauthorised entry, Congestion	3H	<ul style="list-style-type: none"> - Set up barriers to restrict unauthorised access - Hire a spotter to control entry and exit to the site - Clearly mark designated work areas - Schedule tasks to minimise congestion during peak times - Provide specific access routes for vehicles and equipment - Use radio communication for coordination - Update site maps to reflect the current layout - Ensure clear signage is displayed - Conduct periodic security checks - Implement a visitor signing-in process 	1L
3. Assessment of Defective Gear	Exposure to hazardous materials, Sharp edges	4A	<ul style="list-style-type: none"> - Isolate the defective gear immediately on identification - Wear gloves and other PPE to prevent cuts and exposure - Conduct a visual inspection from a safe distance if initial instability is suspected - Use appropriate testing devices to assess the structural integrity - Document all findings thoroughly - Implement safety data sheet (SDS) protocols for hazardous materials - Ensure a qualified safety officer supervises the assessment - Train workers in identifying hazardous materials 	2M
