Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Preparation	Lack of training, Inadequate PPE	3H	<ul style="list-style-type: none"> - Conduct training sessions specifically on asbestos handling - Provide adequate PPE, including respirators and disposable coveralls - Ensure all workers understand the health risks associated with asbestos - Prepare a written plan of work - Limit access to the work area to authorised personnel only - Ensure medical checks for workers handling asbestos - Clearly label areas containing asbestos - Ensure appropriate asbestos warning signage is in place - Maintain equipment registers - Keep the asbestos management plan accessible 	2M
2. Area Isolation	Exposure to air-borne asbestos fibres, Unauthorised access	4H	<ul style="list-style-type: none"> - Use barrier tape and signage to define and secure the removal area - Implement restricted access zones around the work site - Ensure tight seals on doors and windows to prevent exposure - Utilise negative pressure enclosures when necessary - Provide training on entry and exit procedures for work zones - Monitor perimeter and air quality continually - Deploy warning notices around the site perimeter - Install air locks at entry and exit points - Ensure all personnel sign in and out of the sealed area - Brief all workers on emergency protocols specific to asbestos exposure 	3H
3. Decontamination Unit Setup	Cross-contamination, Inadequate decontamination procedures	3H	<ul style="list-style-type: none"> - Set up a decontamination unit with three sections: dirty, shower, clean areas - Ensure water supply and drainage for showers are functioning - Equip decontamination unit with PPE storage - Regularly inspect the decontamination unit for function and leaks - Ensure workers understand the decontamination process - Require all workers to undergo decontamination process before exiting - Store contaminated PPE and materials in sealed bags - Ensure proper waste disposal facilities are available 	2M
