Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Equipment Misuse, Slips and Trips	3H	<ul style="list-style-type: none"> - Conduct a safety briefing before starting work - Ensure all workers are trained in trench support systems - Inspect the site for trip hazards - Remove any unnecessary equipment from the work area - Wear appropriate PPE including non-slip boots - Establish clear communication protocols among the team - Review emergency procedures - Check weather conditions and anticipate changes in ground conditions - Mark and barricade the work area - Assign a safety officer to oversee the preparation 	2M
2. Site Inspection	Ground Instability, Underground Utilities	3H	<ul style="list-style-type: none"> - Perform a detailed site survey - Use ground-penetrating radar to identify utilities - Ensure trenches are shored properly - Inspect shoring equipment for defects - Have a certified geotechnical engineer approve the trench plan - Implement exclusion zones - Update site maps with identified utilities - Continuously monitor ground conditions - Notify all workers of potential underground hazards - Keep emergency contact numbers for utility companies on hand 	2M
3. Equipment Check	Equipment Failure, Injury from Tools	3H	<ul style="list-style-type: none"> - Verify all equipment is maintained and in good working order - Ensure tools are suitable for the task - Provide training on proper equipment use - Have maintenance staff on standby - Use equipment according to manufacturer guidelines - Implement a tool-checkout system - Inspect trench support systems regularly - Remove damaged equipment from service immediately 	2M
