Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Physical injury from lifting, Slips and trips	3H	<ul style="list-style-type: none"> - Conduct a site visit to assess access to the air conditioning units - Use mechanical lifting equipment to handle heavy items - Ensure clean and clear pathways to prevent slips - Train staff on proper manual handling techniques - Conduct a safety briefing on the tasks involved - Wear appropriate footwear with good grip - Place signage to warn of potential trip hazards in the area - Limit number of people in the work area at any time - Use trolley system to support lifting tasks - Check weather conditions if work is outdoor 	2M
2. Shut Down HVAC System	Electrical shock, Unexpected system activation	3H	<ul style="list-style-type: none"> - Isolate electrical supply before work begins - Confirm system is fully powered down - Use lockout/tagout procedures - Verify system shutdown with authorised personnel - Wear insulated gloves when handling electrical components - Communicate shutdown process with all team members - Display adequate signage to notify of shutdown work - Confirm no power is restored until work is complete - Document shutdown procedures for future reference - Schedule work during low demand times where possible 	1L
3. Access Filters	Falls from height, Structural collapse of ladders	4A	<ul style="list-style-type: none"> - Use certified ladders and scaffolding for access - Conduct pre-use inspections on all access equipment - Ensure all ladders are on stable, even ground and free from defects - Employ a second person to stabilise ladder, if necessary - Limit access to the work area to prevent interference - Use safety harnesses when working at height - Adhere to the manufacturer's instructions for ladder use - Ensure platforms are appropriately secured 	2M
