Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence		People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative	
Catastrophic		Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE	
Major		Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Moderate		Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>	
Minor		First-aid only, no lost time		negligible delay		Isolated non-conformance			
Insignificant		No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	lack of tools, improper PPE	3H	<ul style="list-style-type: none"> - Conduct a toolbox talk before beginning the task - Ensure all tools are available and serviceable - Confirm PPE such as gloves, safety boots and high-visibility vests are worn - Provide training on the use of the tools and PPE - Perform a pre-start equipment check - Secure the work area to prevent unauthorised entry - Display safety signage around the work area - Check weather conditions to ensure safe working environment - Assign roles and responsibilities clearly to team members - Review the procedure with all staff involved 	2M
2. Lifting Bus	bus instability, lifting equipment failure	4H	<ul style="list-style-type: none"> - Use a certified, well-maintained hydraulic lift - Place wheel chocks to prevent bus from rolling - Ensure lifting point is clear of obstructions - Conduct a safety check on lifting equipment prior to use - Engage lock-out procedures to secure bus position - Use trained personnel to operate lifting equipment - Monitor lifting process continually for any signs of instability - Apply the bus handbrake securely before lifting - Ensure the bus is on a level surface - Use a safety observer during the lifting process 	2M
3. Removing Wheel Nuts	tool slippage, musculoskeletal strain	3H	<ul style="list-style-type: none"> - Use the correct size socket for wheel nuts - Apply a firm grip on the tool to prevent slippage - Use power tools where suitable to reduce physical strain - Train workers on proper ergonomics and tool handling - Take regular breaks to avoid fatigue during the task - Apply penetrating oil to stubborn wheel nuts to ease removal - Use anti-fatigue mats for workers standing for extended periods - Engage assistance for particularly tight or difficult wheel nuts 	1L
