Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Electric shock, Inadequate safety gear	3H	<ul style="list-style-type: none"> - Conduct a safety briefing prior to commencement of work - Ensure all personnel are equipped with Personal Protective Equipment (PPE) - Verify that all tools and equipment are tested and tagged for electrical safety - Display warning signs around the work area - Restrict access to authorised personnel only - Use insulated tools only - Conduct pre-work inspection of all equipment - Review Safety Data Sheets for all components involved in the task - Ensure first aid facilities are accessible - Verify current isolation procedures are up-to-date 	2M
2. Isolate Equipment	Failure to isolate, Unauthorised access	4H	<ul style="list-style-type: none"> - Tag out and lock out all energy sources - Ensure that equipment is fully de-energized - Communicate with site manager - Implement an approved lockout/tagout process - Provide training for all team members on isolation procedures - Communicate isolation status to all stakeholders - Place barriers around the work area - Secure all lockout devices with unique locks - Keep isolation documentation on-site and up-to-date - Employ a buddy system to verify complete isolation 	2M
3. Dismantle Components	Falling parts, Manual handling injuries	3H	<ul style="list-style-type: none"> - Use appropriate mechanical lifting aids - Educate workers on proper manual handling techniques - Ensure that all parts are securely fastened before moving - Conduct a pre-task briefing focusing on handling and lifting - Designate a clear, well-lit area for disassembly work - Identify and clear any slip or trip hazards - Assign a designated spotter for the task - Arrange parts orderly to avoid clutter 	2M
